

Step 12: Low-fidelity prototype

Image 1: All screens laid out in the T format

Image 2: All screens with "device" to show overall flow

Image 3: The primary interface where users quickly access core WorkMate functionalities. It offers immediate navigation to scheduling (Planner), peer support (Connect), HR support (File Complaints, Track Reports), and Company Resource management.

- Planner: Direct access to upcoming tasks and events.
- Peer Support: Instant connection to peers or company forums for emotional or collaborative support.
- HR Support: Easy options for filing complaints and tracking HR reports.
- Resources: Quick resource overview, cancellations, and management.

User opens the WorkMate application (through Slack/Teams integration or web app link).

Image 4: An intuitive conversational AI-driven chat interface that provides real-time emotional and HR assistance. Employees privately discuss workplace issues, stresses, or request HR-related help.

- AI Greeting: Welcomes the user, signaling openness and availability.
- Message Box: User inputs concerns or queries here.
- Chat History: Easily review past interactions.
- Quick-Select Options: Suggest actions for frequent scenarios (stress relief tips, HR reporting guidance, etc.).

User clicks "Chat with Me" from any other screen (Dashboard, Planner, Resources).

Image 5: Detailed weekly schedule interface for managing and visualizing tasks or events, helping employees cope with stress related to workload.

- Weekly Calendar: View tasks at-a-glance to manage workload efficiently.
- Navigation Controls: Move forward or backward by week.
- Chat Access: Quick "Chat with Me" button for instant emotional or task-management assistance.

User selects the "Planner" option from the Dashboard/Homepage.

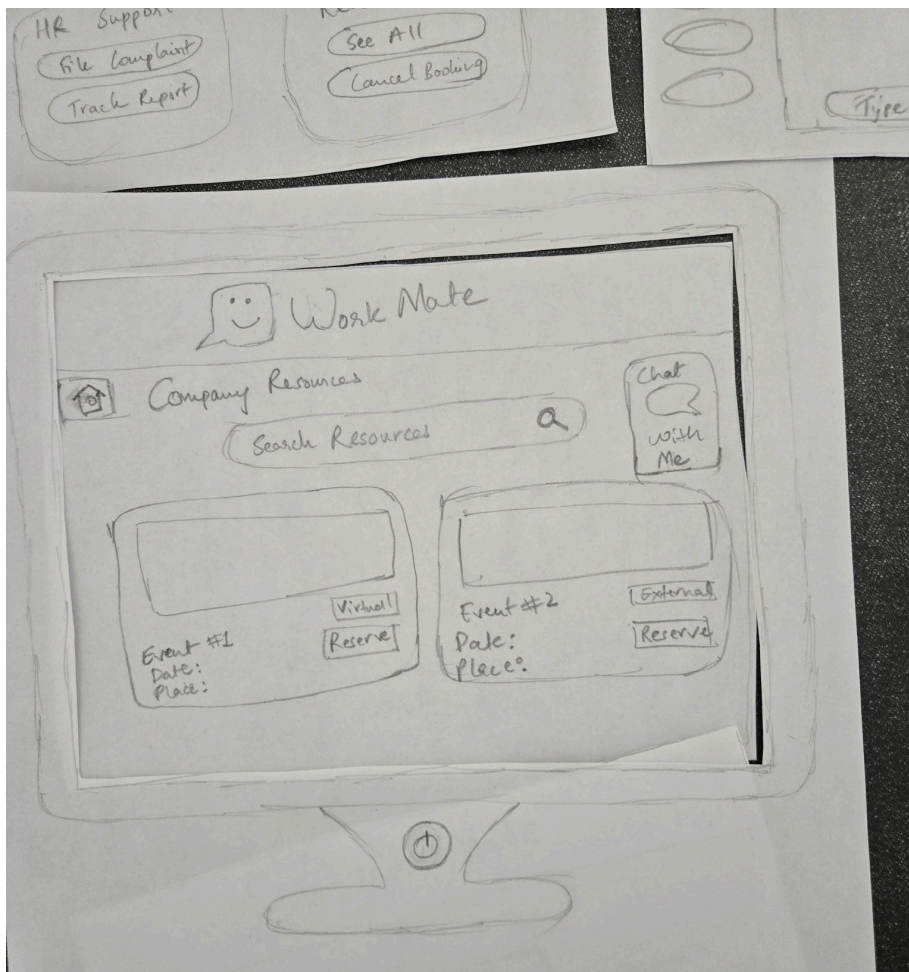

Image 6: An organized resource management screen that simplifies reserving company events or resources (meeting rooms, virtual events) directly reducing friction or stress related to logistical issues.

- Search Bar: Fast, stress-free searching of company resources/events.
- Resource/Event Cards: Concise display with type (virtual/external), date, and reservation button.
- Chat Button: Accessible AI assistant support for guidance or clarifications.

User clicks on "Resources – See All" from the Dashboard/Homepage.

Image 7: Provides event/resource details clearly and allows users to quickly reserve attendance, reducing anxiety over event scheduling conflicts.

- Event Description: Comprehensive overview to help users make informed decisions.
- Session Details: Date, time, location clearly displayed.
- Reserve button: User reserves attendance effortlessly.

User clicks on a specific event/resource card from the Company Resources Overview screen.

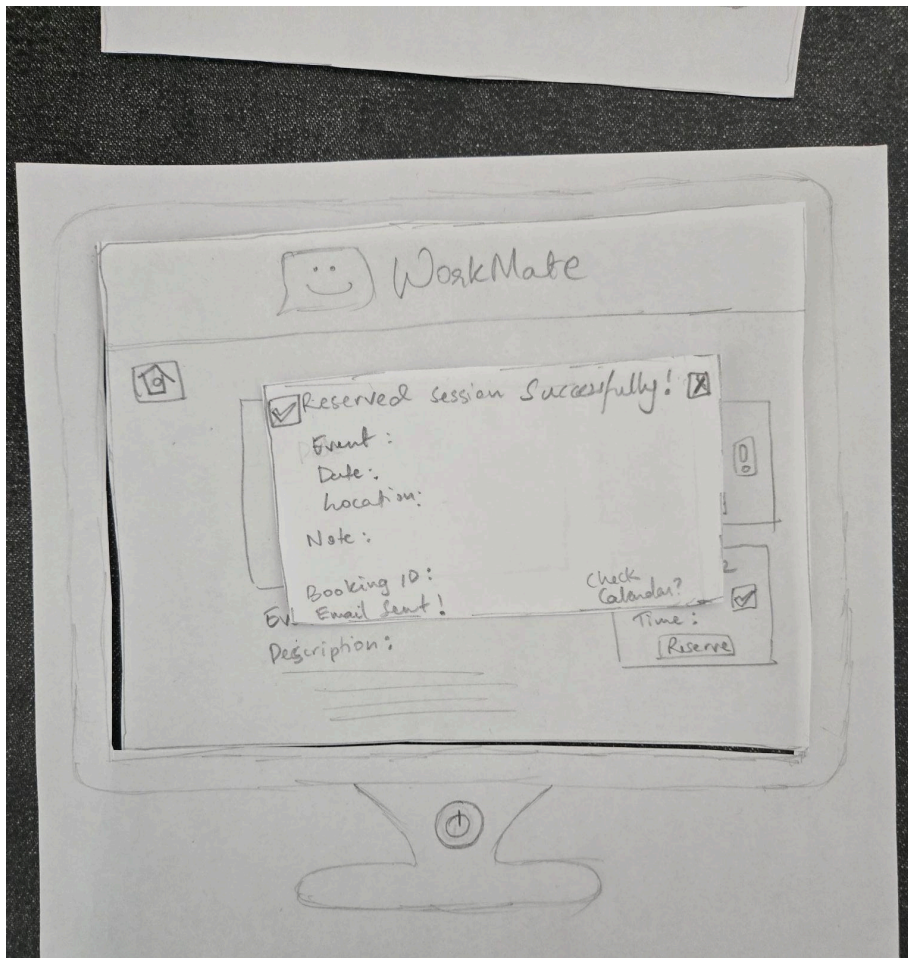

Image 8: Immediate positive confirmation following successful event/resource reservation, providing reassurance to reduce stress around scheduling tasks.

- Booking Confirmation: Clearly displayed reservation details (event, date, booking ID, notes).
- Check Calendar: Quick option to verify event integration in personal calendar.

User checks the reserve option in the Resource/Event Detail Screen and successfully books an available event slot.

Image 9: A user-friendly notification clearly indicating a reservation conflict or error, providing clarity and guidance to manage emotional stress associated with scheduling difficulties.

- Conflict Notice: Clearly stated issue (e.g., double-booking conflict).
- Existing Event Details: Explicitly mentions the conflicting event (date, time) to help users easily rectify the conflict.

User attempts to reserve a session from Resource/Event Detail Screen that clashes with another scheduled event.
